Professional Summary

I'm Theo, a full-stack developer based in Bucharest, Romania. I started my career as a QA Engineer, which gave me a strong foundation in software testing. Transitioning into software development, I specialized in IoT integration and building dashboards for manufacturing plants. I completed my Computer Science degree at the University of Bucharest in the summer of 2024, enhancing my skills in software development and system design. Alongside my technical work, I'm passionate about cinema and storytelling, having taught filmmaking, written for online film journals, and worked as a game designer. These creative pursuits influence my approach to building functional, user-centric products.
